Summary

I'm a web developer based in Charlotte, NC. I specialize in lightweight, scalable front-end architecture with the React framework. I aim to find simple solutions to complex problems, and build independence with strong research and problem solving skills.

I have exhibited the following skills in a variety of personal and open-source projects:

- Careful state management with pure functions
- Component based architecture
- Understanding of deeper Javascript concepts like closure, prototypal inheritance, and function/object composition
- Prioritize UI / UX and user-centered design
- Consistent documentation style with JSDoc
- 100% responsive and cross-browser design always
- React / Redux debugging with understanding of the JS engine and runtime, using the appropriate browser extensions or middleware
- Performance considerations for UX and emissions, often in regards to the React render cycle
- Learning and using API's
- Integrating and familiarizing myself with a new codebase in a timely manner
- Understanding of git collaboration workflows, and working with remotes

I believe that ultimately, programming is less about what you know, and more about what you can figure out. I strive to be independent and trustworthy, and approach problems with the attitude of a lifelong learner.

Experience

Supervisor

BlueH2O Irrigation

- Maintenance coordination of 50+ commercial irrigation systems
- Planned, proposed, and coordinated projects for commercial contractors and residential customers, including administration and follow-up service
- Designed new irrigation systems
