## Summary

I'm a web developer based in Charlotte, NC. I specialize in lightweight, scalable front-end architecture with the React framework. I aim to find simple solutions to complex problems, and build independence with strong research and problem solving skills.

- I prefer component based architecture whenever possible in all technology stacks.

- I understand the importance of code review. A feature is incomplete until it has been refactored and documented according company standards. My first solution is rarely my final solution.

- I understand deeper Javascript concepts like closure, prototypal inheritance, and function/object composition.

- I am always considering UI / UX and user-centered design when building features.

- I believe that ultimately, programming is less about what you know, and more about what you can figure out. I strive to be an independent, trustworthy developer, and a lifelong learner.

## Experience

### Supervisor
BlueH2O Irrigation
Aug 2017 - Nov 2019 (2 years 4 months)
- Maintenance coordination of 50+ commercial irrigation systems
- Proposed and arranged service for commercial contractors and residential customers
